

Girls Inc: April Vacation Program, April 17-21, 2017

girls
inc.®

MONDAY, April 17
Drama Mamas

Is your daughter a budding starlet? Today we will practice reading and memorizing scripts and cues. Literacy is an important part of a successful acting career. We will choose our favorite books and act them out. We will practice sequencing by laying out the scenes. Using literary techniques like tone and mood, we will create the right dramatic effects. We will end the day by playing improv games and writing our own original scripts.

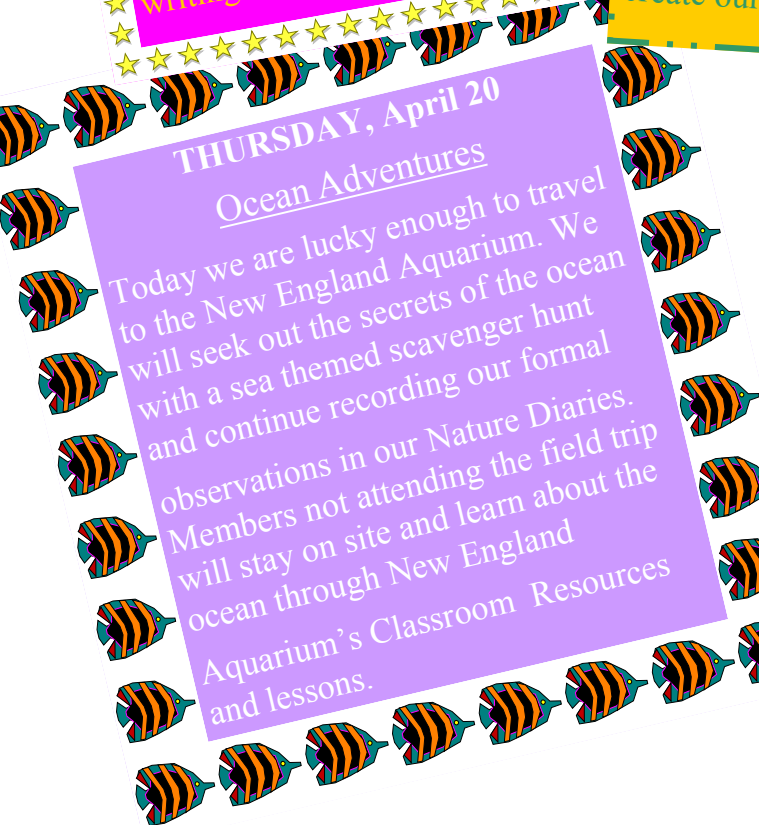

TUESDAY, April 18
Science Stars

Today is for all the girls who have STEM aspirations. We will practice literacy in our scientific inquiries by using graphic organizers, that introduce the scientific method for younger researchers and help them visualize the right steps in the right order. For our older scientists, we will get creative and write our own experiments, together, and create our own organizers.

WEDNESDAY, April 19
Bold Explorers

Girls who love the outdoors have lots of ways to explore nature. Today we will be like Darwin and keep a record of all the plants and animals we discover. We will draw pictures and write descriptions of our explorations. We will learn about ecosystems and the intricate parts that make up their delicate balance.

THURSDAY, April 20
Ocean Adventures

Today we are lucky enough to travel to the New England Aquarium. We will seek out the secrets of the ocean with a sea themed scavenger hunt and continue recording our formal observations in our Nature Diaries. Members not attending the field trip will stay on site and learn about the ocean through New England Aquarium's Classroom Resources and lessons.

FRIDAY, April 21
Culinary Creators

The kitchen has wonderful opportunities to practice literacy skills. Today your girl will learn to read a recipe and follow the instructions. Once she's a master at reading recipes, we will get creative and write her own recipes, with clear, and precise instructions, using correct terms and ordering the steps by sequencing. We will also practice numeracy by doubling recipes and learning to measure serving sizes and adding up nutritional values.
